DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Objections

2. Claim 2 is objected to because of the following informalities:
in line 2, delete "of".
Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Kitahara (US 5,332,890).

Kitahara teaches a contact terminal 6a, which writes/reads information of an IC chip, electrically contacts an IC terminal 81 of a card 1. A contact region 6 is a region placed at the upper portion of a card substrate 80 occupied when the contact terminal 6a contacts the IC terminal 81 (col. 8, line 64-col. 9, line 2). Under the state before the card 1 reaches its fully

loaded position, the terminal holder 6 is inclined to the direction of an arrow R1 by a force of a holder spring 63 as shown in figure 12A. This state is maintained until the card 1 contacts a stand-up portion 6c. If the card 1 contacts the stand-up portion 6c, the terminal holder 6 rotates in a direction of an arrow R2 against the force of the holder spring 63 as shown in figure 12B, and the contact terminal 6a electrically contacts the IC terminal 81 simultaneously with the arrival of the card 1 at the mounting position. This electrical contact makes it possible to perform the recording/reproducing operation to/from the IC chip (col. 9, lines 51-66).

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Kojima (US 5,984,184) teaches an IC card read/writer having vertically moving reading contact pins.

Moriya (US 5,984,183) teaches a card reader for two kinds of data cards.

Dos Santos Pato et al. (US 5,929,416) teach reading head arrangement for two data card types.
